

# Reading Seminar on Number Theory

主題：On uniformization of t-motives (I)

講者：Dr. Özge Ülkem (Academia Sinica)

時間：November 15, 2024 10:30~11:30 am

地點：第三綜合大樓 R723

Abstract: In this series of seminars, we will discuss F. Gardeyn's thesis, "t-motives and Galois Representations." Our focus will be on the section where many equivalent characterizations of the uniformization of t-motives (a la Anderson) are presented. We will introduce the key concepts and provide a detailed explanation of the case of Drinfeld modules. The goal is to gain a deeper understanding of certain aspects of Theorem 5.13 in Gardeyn's thesis.
