

# Reading Seminar on Number Theory

主題：Introduction to Artin L-function (II)

講者：陳健樺博士（國家理論科學研究中心）

時間：October 11, 2024 **10:30~11:30 am**

地點：第三綜合大樓 R723

Abstract: The theory of L-functions offers a robust framework for investigating the arithmetic properties of integers and, more generally, integers in number fields. This approach involves translating these properties into the analytic behavior of specific functions, which can then be studied using tools from analysis. In this series of talks, Dr. Chien-Hua Chen will introduce Artin L-functions, following Horawa's notes, starting with the abelian case and extending to the general case. The aim of his talks is to provide an overview of key topics, including Brauer's Theorem, Artin representations, and Artin conductors, among others.
