

Calculus — Homework 2 (Spring 2024)

1. State whether the sequence converges and, if it does, find the limit.

- | | | |
|---|-------------------------------------|--|
| (a) $a_n = 2^{2/n}.$ | (d) $a_n = \frac{4^{100n}}{n!}.$ | (g) $a_n = \left(\frac{n-1}{n}\right)^n.$ |
| (b) $a_n = \left(\frac{2}{n}\right)^n.$ | (e) $a_n = \int_{-n}^0 e^{2x} dx.$ | (h) $a_n = \int_0^{1/n} \cos e^x dx.$ |
| (c) $a_n = \frac{\ln(n+1)}{n}.$ | (f) $a_n = n^2 \sin \frac{\pi}{n}.$ | (i) $a_n = \left(\frac{1}{2} + \frac{3}{n}\right)^{3n}.$ |

2. Show that if f and g grow at the same rate, then $f = O(g)$ and $g = O(f)$.

3. Prove the following.

- | | |
|------------------------------|--|
| (a) $e^x = o(e^{e^x}).$ | (c) $3x^5 - 100x^2 + 5x + 1 = O(x^5).$ |
| (b) $\ln(\ln x) = o(\ln x).$ | (d) $2^x = O(2^{x^2}).$ |

4. Evaluate the integrals.

- | | |
|---|--|
| (a) $\int_0^\infty \frac{dx}{x^2 + 1}.$ | (c) $\int_{-1}^\infty \frac{dx}{x^2 + 5x + 6}.$ |
| (b) $\int_{-\infty}^0 xe^x dx.$ | (d) $\int_{-\infty}^\infty \frac{1}{e^x + e^{-x}} dx.$ |

5. This problem shows that $\int_{-\infty}^\infty f(x) dx$ and $\lim_{b \rightarrow \infty} \int_{-b}^b f(x) dx$ are different.

- (a) Show that $\int_0^\infty \frac{2x}{x^2 + 1} dx$ diverges and hence that $\int_{-\infty}^\infty \frac{2x}{x^2 + 1} dx$ diverges.
 (b) Show that

$$\lim_{b \rightarrow \infty} \int_{-b}^b \frac{2x}{x^2 + 1} dx = 0.$$
